

TEKDRY®

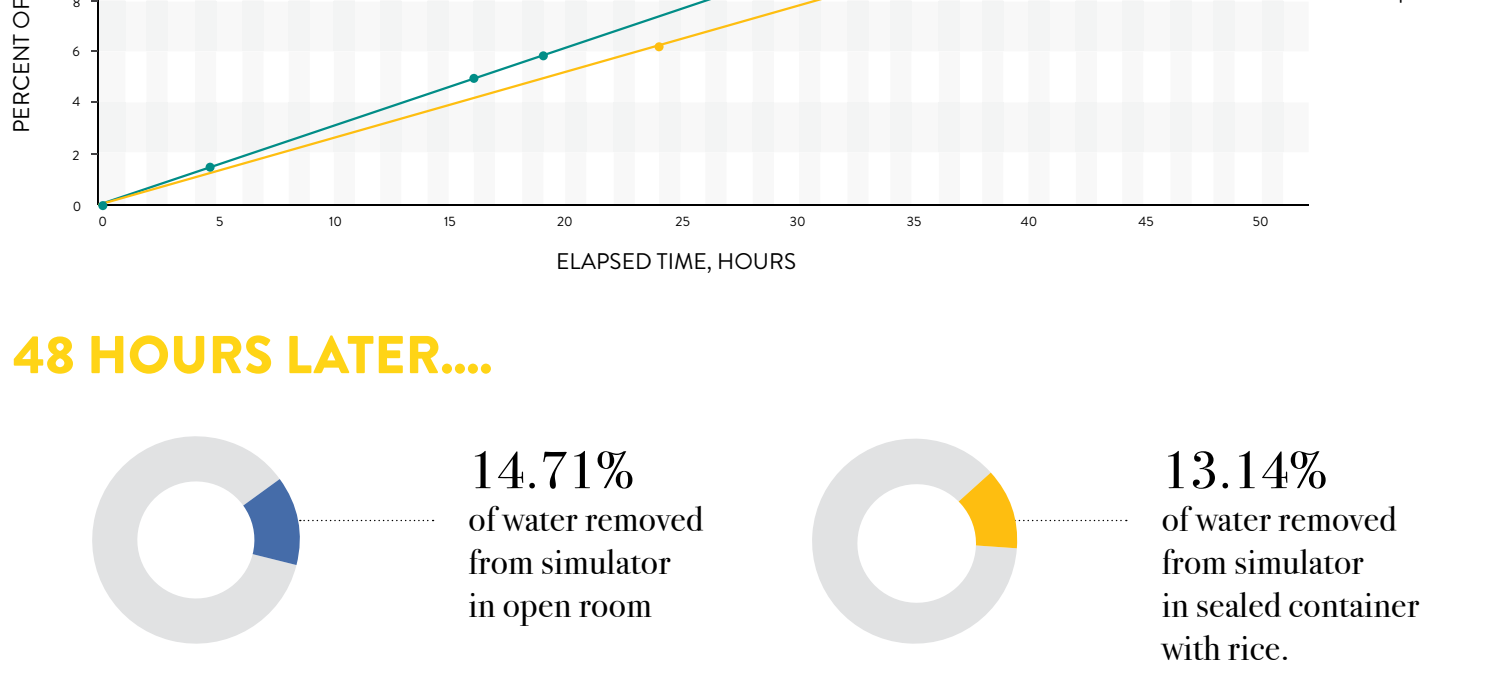

DTJ Consulting

There is a wide public perception that you can dry a wet cell phone by **placing it in a sealed container of rice for a day or two**. This report describes an experiment to evaluate the hygroscopic properties of rice, specifically its ability to remove water from a simulated cell phone.

IN SHORT

To summarize the results of our experiment, we found putting a wet phone in rice is *no more effective* than leaving the device out in open air.

48 HOURS LATER....

14.71% of water removed from simulator in open room

13.14% of water removed from simulator in sealed container with rice.

So, what actually works?

SAY HELLO TO

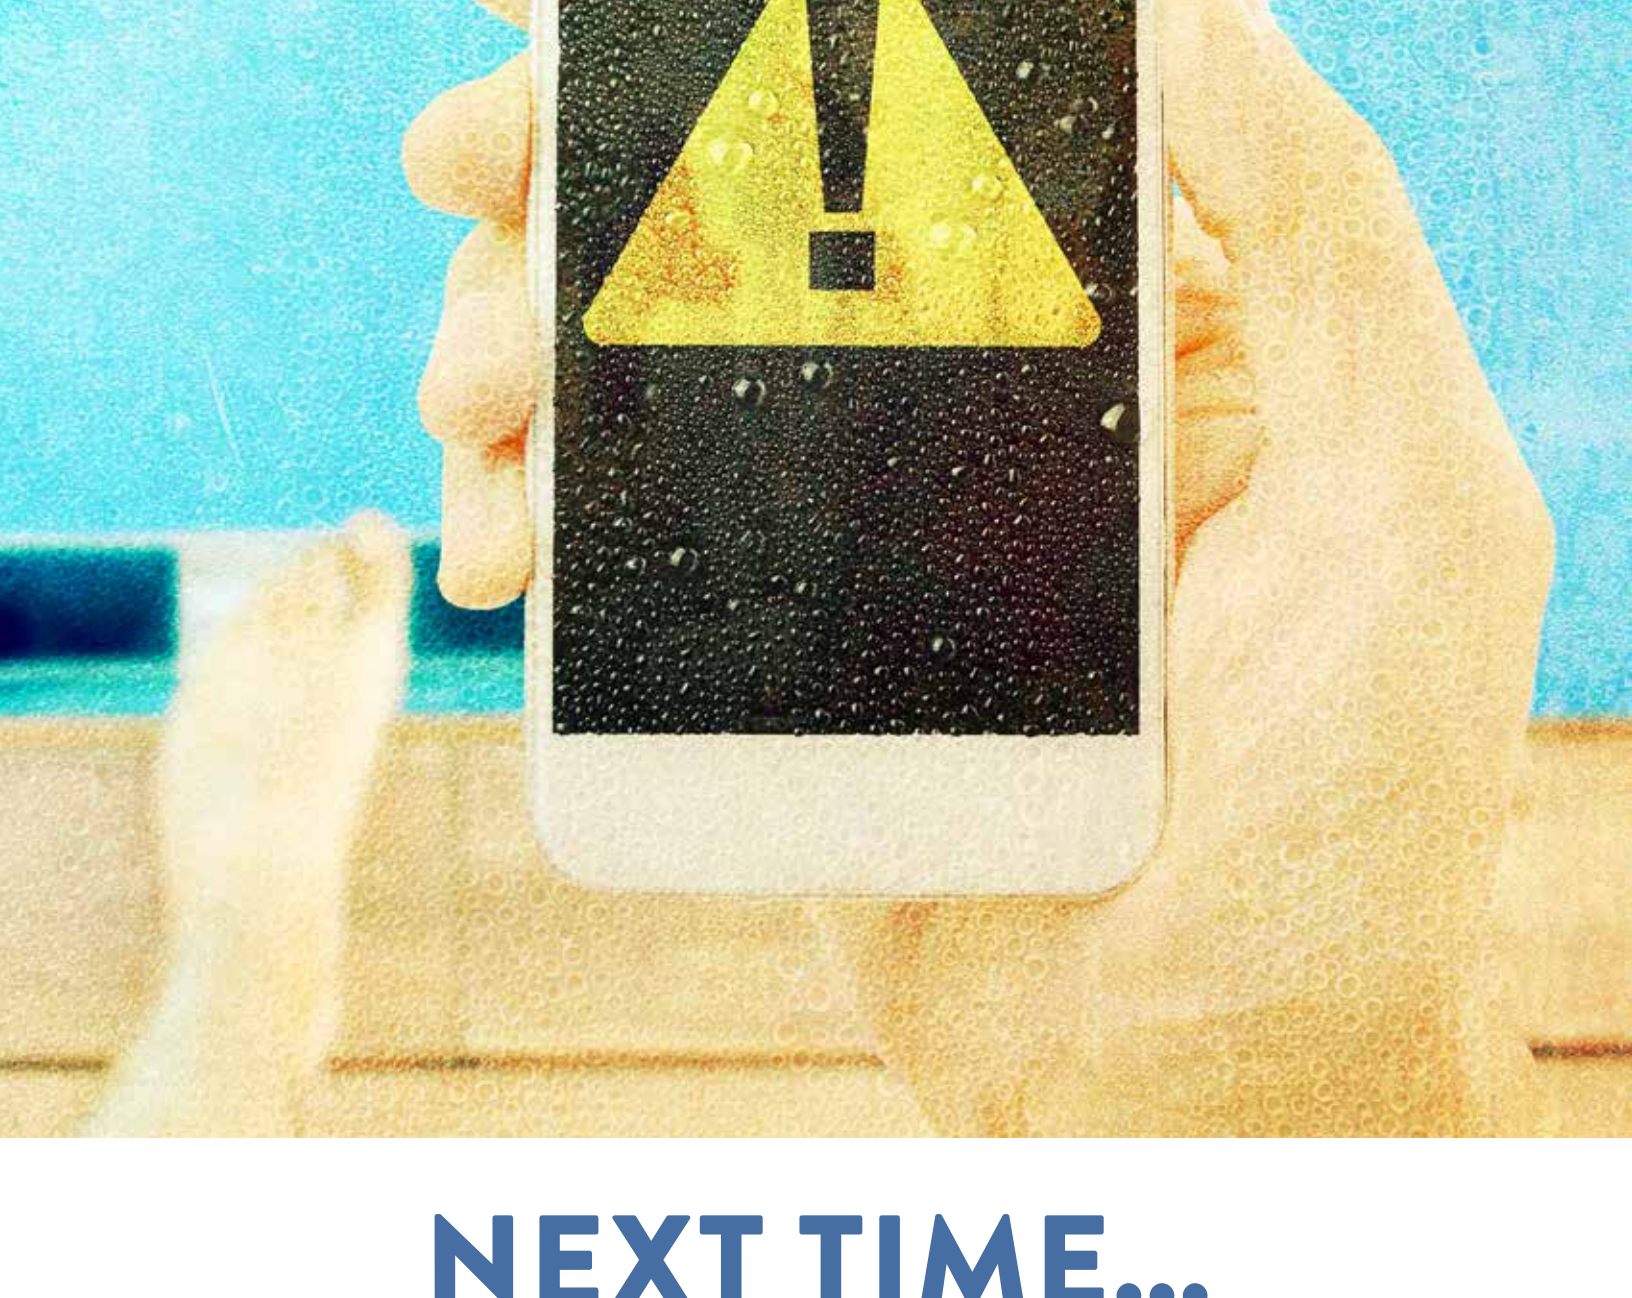

Our patented technology uses a vacuum to lower the pressure in the machine's chamber. This in turn, lowers the boiling point of water. **Within 30 minutes, all moisture safely evaporates** from any device placed inside.

<p>DEVICE IN A BOWL OF RICE</p> <p>13% LIQUID REMOVED</p> <p>After 48 Hours Only 13% of liquid removed</p>	<p>DEVICE DRIED OUT IN AIR</p> <p>15% LIQUID REMOVED</p> <p>After 48 Hours Only 15% of liquid removed</p>	<p>DEVICE DRIED OUT WITH TEKDRY MACHINE</p> <p>100% LIQUID REMOVED</p> <p>In just 30 Minutes 100% of liquid removed</p>
---	--	--

The myth is busted. It's time to...

#STICKITTORICE

NEXT TIME...

Shut off your device. This helps prevent a short circuit.

Never plug in a wet device. Plugging in wet cuts the chances of a successful rescue in half.

TekDry will fix your wet device. We will use our in-store TekDry water removal machine. It only takes 30 minutes.

DID WE MENTION THE BEST PART?

You only pay if it works.

<p>HELPFUL TIPS</p>	<p>If your phone is dropped in salt water, turn it off and rinse with fresh water to prevent corrosion from the salt.</p> <p>The heat from using a blow dryer or oven can warp and damage sensitive equipment in your phone.</p>
